Power BI API Extravaganza

- Not a Power BI Intro!
- 100% focus on the REST API's
- Lots of powershell...
- Fast Paced 😊

Focus on the possibilities not details...

Power BI REST API's

Collection of REST API's for:

- Administration
- Monitoring
- Productivity / DevOps
- Real-Time
- Embedding— Out of Scope 😊

The screenshot shows the Microsoft Docs page for Power BI REST APIs. The page has a navigation sidebar on the left with a search bar and a list of topics including Admin, Apps, Available Features, Capacities, Dashboards, Dataflow Storage Accounts, Dataflows, Datasets, Embed Token, Gateways, Groups, Imports, Pipelines, Push Datasets, Reports, Template Apps, and Users. The main content area is titled 'Power BI REST APIs' and includes a sub-header 'REST Operation groups'. Below this is a table with two columns: 'Operation group' and 'Description'.

Operation group	Description
Admin	Operations for working with administrative tasks.
Apps	Operations for working with Apps.
Available Features	Operations that return available features.
Capacities	Operations for working with capacities.
Dashboards	Operations for working with dashboards.
Dataflow Storage Accounts	Operations for working with dataflow storage accounts.
Dataflows	Operations for working with dataflows.
Datasets	Operations for working with datasets.

[Power BI REST APIs - Power BI REST API | Microsoft Docs](#)

How can I “play” with the API's?

- Go to the [Docs](#) and “Try it” with your Power BI tenant data

Contents

Groups - Get Groups

Service: Power BI REST APIs
API Version: v1.0

Returns a list of workspaces the user has access to.

Note: Users that have been recently added to a group may not have their new group immediately available, see [Refresh user permissions](#).

Required scope: Workspace.Read.All or Workspace.ReadWrite.All
To set the permissions scope, see [Register an app](#).

HTTP

Copy

Try it

```
GET https://api.powerbi.com/v1.0/myorg/groups
```

With optional parameters:

HTTP

Copy

```
GET https://api.powerbi.com/v1.0/myorg/groups?$filter={$filter}&$top={$top}&$skip={$skip}
```

URI Parameters

Name	In	Required	Type	Description
\$filter	query		string	Filters the results, based on a boolean condition
\$skip	query		integer int32	Skips the first n results

requestid: 983f107e-a730-498f-b342-a5a210de322e

Body

JSON

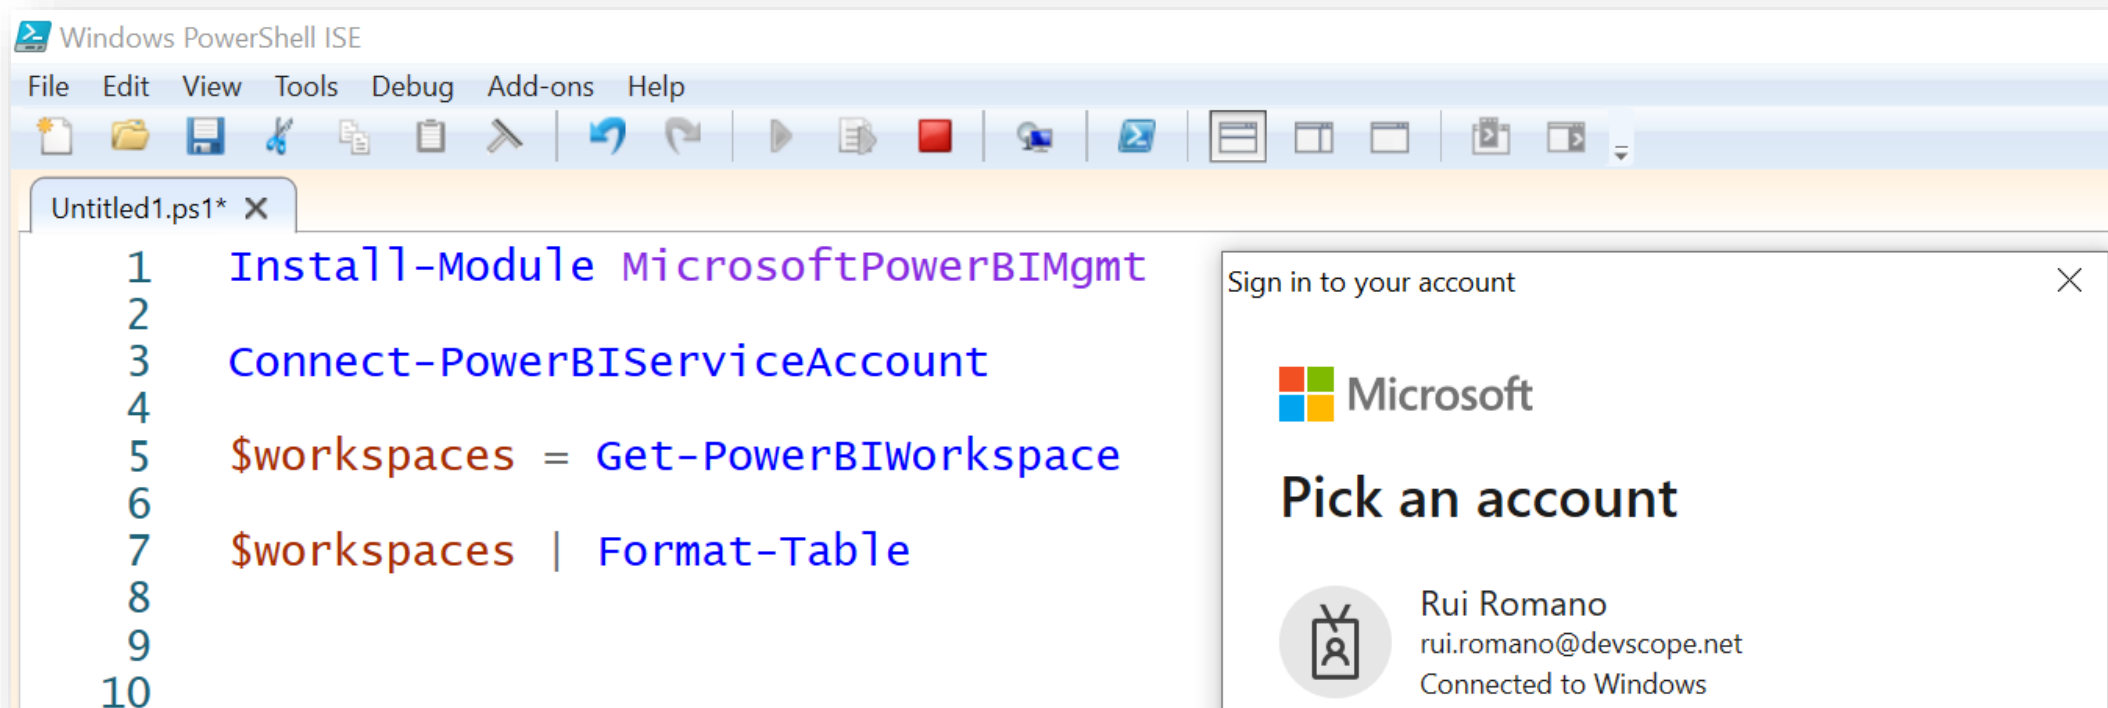

Copy

```
{
  "@odata.context": "http://wabi-west-europe-redirect.analysis.windows.net/v1.0/myorg/$metadata#groups",
  "@odata.count": 110,
  "value": [
    {
      "id": "43504e54-e44d-4a5a-bc2f-d3246fc5568a",
      "isReadOnly": false,
      "isOnDedicatedCapacity": false,
      "type": "Group",
      "name": "pbtiptstricksdata"
    },
    {
      "id": "29d49eaf-4016-4f67-91f1-7ba111cdf086",
      "isReadOnly": false,
      "isOnDedicatedCapacity": false,
      "type": "Group",
      "name": "DVS Sharepoint Play"
    },
    {
      "id": "a36d64a4-9cf7-438a-92af-87db0b54e562",
      "isReadOnly": false,
      "isOnDedicatedCapacity": false,
      "type": "Group",
      "name": "Lisbon Data8ricks"
    },
    {
      "id": "e4790749-58d6-4608-855a-c9124bd9eab7",
      "isReadOnly": false,
      "isOnDedicatedCapacity": false,
      "type": "Group",
      "name": "PBI Embed"
    },
    {
      "id": "ca6dc9f6-62eb-43fb-9244-4c2ab87d3803",
      "isReadOnly": false,
      "isOnDedicatedCapacity": false,
      "type": "Group",
      "name": "WMI Sales Home"
    }
  ]
}
```

How can I work with the API's?

- You need to be comfortable with code/script/automation (power automate)
Any language that can make an HTTP request is compatible: .Net, PowerShell, Python,...
- There are multiple libraries/packages available:
PowerShell – [MicrosoftPowerBIMgmt](#), [PowerBIPS](#) (♥)
Python – [python-power-bi](#)
.Net – [Microsoft.PowerBI.Api](#)
- If possible, use a Service Principal

Demo MicrosoftPowerBIMgmt

API Authentication

- OAuth 2.0
- Authentication Flows:

Authentication Flow	Interactive	Requirements
Client Credentials (Recommended)	No	Azure AD Service Principal
Auth Code	Yes	Power BI Account

```
POST /token HTTP/1.1
Host: authorization-server.com

grant_type=client_credentials
&client_id=xxxxxxxxxx
&client_secret=xxxxxxxxxx
```

```
HTTP/1.1 200 OK
Content-Type: application/json
Cache-Control: no-store
Pragma: no-cache

{
  "access_token": "MTQ0NjJkZmQ5OTM2NDE1ZTZjNGZmZjI3",
  "token_type": "bearer",
  "expires_in": 3600,
  "refresh_token": "IwOGYzYTlmM2YxOTQ5MGE3YmNmMDFkNTVk",
  "scope": "create"
}
```

Service Principal – Manual Step by Step

1. Go to [Azure AD Active Directory](#)
2. Go to [App Registrations](#) and create a new App (leave defaults)
3. Generate a new App Secret
4. Save the App Id, App Secret & Tenant Id
5. [Create/Reuse an Azure AD Security Group](#)
6. Add the Service Principal to the Security Group as a member
7. Authorize the Security Group in Power BI Admin Portal Tenant Settings:
 - Allow service principals to use Power BI APIs
 - Allow service principals to use read-only Power BI admin APIs – if admin calls are necessary (ex: monitoring)

Note: You don't need to add any Power BI API Permissions

More info: [link](#)

dev>scope

Scenarios / Demos

- DAX Queries w/ REST API
- Monitoring
- Productivity / DevOps
- Realtime

Power BI DAX Query API

REST API - Dataset Execute Queries

- The coolest [API](#)! 😊
- Works on Premium & **Shared (PRO)**

- Requirements

“Build” permission on the dataset

Enable Tenant Setting “Allow XMLA Endpoints and Analyse in Excel with on-premises datasets”

- [Main Limitations](#)

Result sets capped to 100k rows

Integration settings

- ✓ **Allow XMLA endpoints and Analyse in Excel with on-premises datasets**
Enabled for the entire organization

Users in the organization can use Excel to view and interact with on-premises Power BI datasets. This also allows connections to XMLA endpoints.

☒ Enabled

Apply to:

☒ The entire organization

☐ Specific security groups

☐ Except specific security groups

Apply

Cancel

```
1 $requestUrl = "datasets/88f9df14-be84-4473-a3d1-55ac7c8d1ff4/executeQueries"
2 $requestBody = @"
3 {
4   "queries":
5   [
6     {
7       "query": "EVALUATE SUMMARIZECOLUMNS(
8         ROLLUPADDTOTOTAL(
9           ROLLUPGROUP('DimCustomer'[LastName], 'DimProduct'[ModelName]), \\"IsGrandTotalRowTotal\\"
10        ),
11        TREATAS ( {\\\"Adams\\\"}, DimCustomer[LastName]),
12        \\"SumSalesAmount\\", CALCULATE(SUM('FactInternetSales'[SalesAmount]))
13      )
14    ]
15    "serializerSettings":{"includeNulls": true}
16  }
17  @"
18
19
20 Login-PowerBI
21 $result = Invoke-PowerBIRestMethod -Method Post -Url $requestUrl -Body $requestBody
22
23 $parsed = $result | ConvertFrom-Json
24 $parsed.results[0].tables[0].rows | Format-List
```

The screenshot shows the output of the PowerShell script, displaying a table of results for the DAX query. The results are as follows:

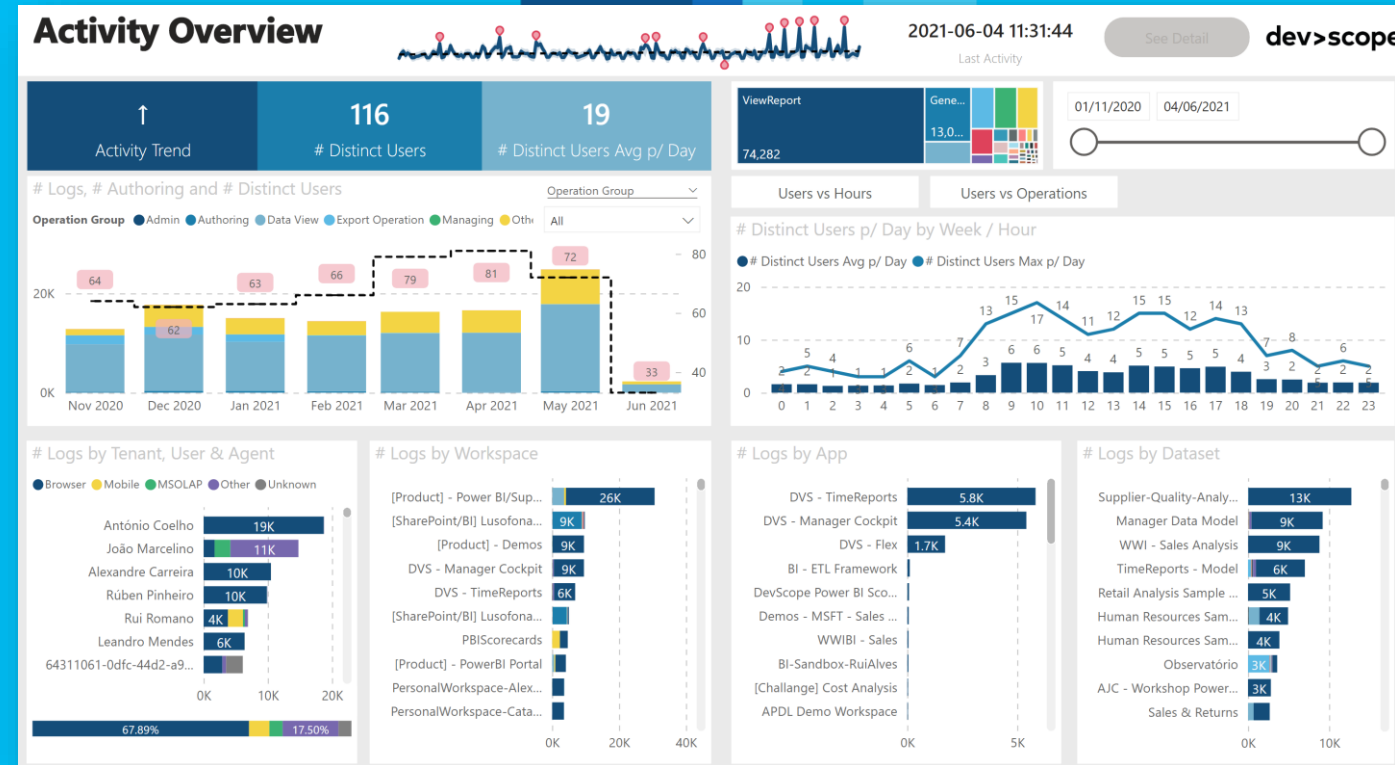

DimCustomer[LastName]	DimProduct[ModelName]	IsGrandTotalRowTotal	SumSalesAmount
Adams	Touring-Tire	False	86.97
Adams	Touring-1000	False	9936.28
Adams	Touring-3000	False	1484.7
Adams	Road-350-W	False	10205.94
Adams	Road-750	False	2159.96
Adams	Mountain-400-W	False

Can you answer these questions?

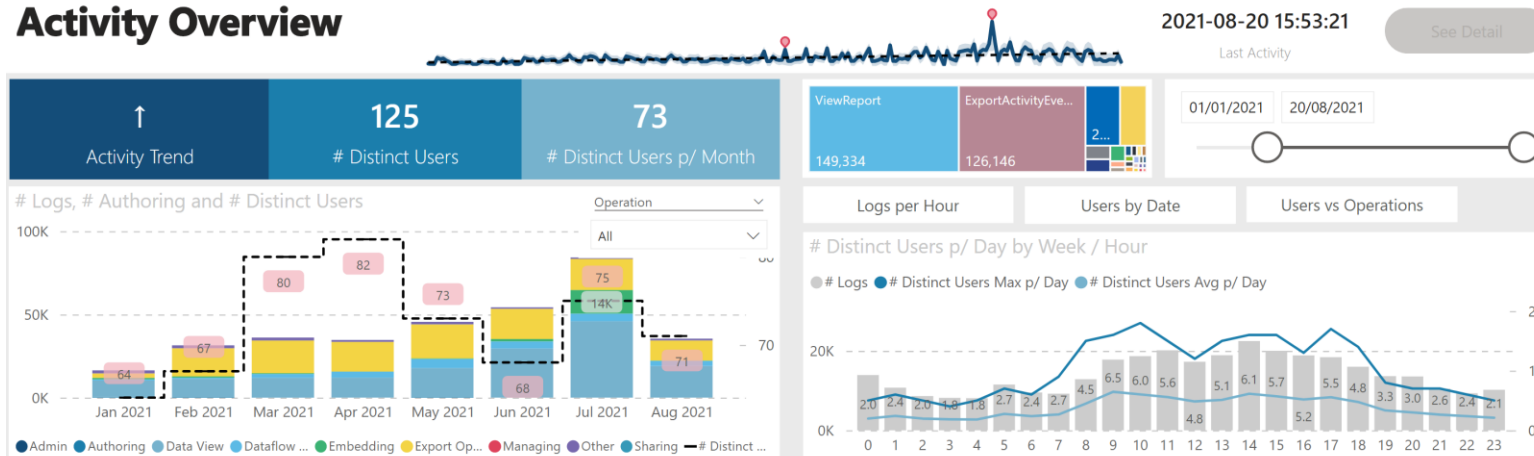

- Who are most active users?
- Which Reports/Workspaces/Datasets/Apps are mostly used?
- Are Personal Workspaces being used? How is content being shared?
- Do your users access from Browser/Mobile/Excel? Which browser?
- Top used DataSource's? FileSystem/OneDrive? SQL? Sharepoint? DataLake?
- How many **distinct users**? Per Month? Per day? Per hour?
- DataSets Refreshing trends/average/errors?
- DataSets/Reports not used in more than 1 year?
- How many users with license don't use Power BI in more than 3 months?
- Are developers following Dataset naming conventions?

Architecture

Power BI Monitor Reports

Users & Licenses	Users & Licenses	Graph API – Users
	Licenses Details	Graph API – SubscribedSKUs

Productivity / DevOps

Rebind Reports

Why?

Dataset issue/corruption

Minimize user impact on a dataset change / refresh

Azure AS to Premium Migration

...

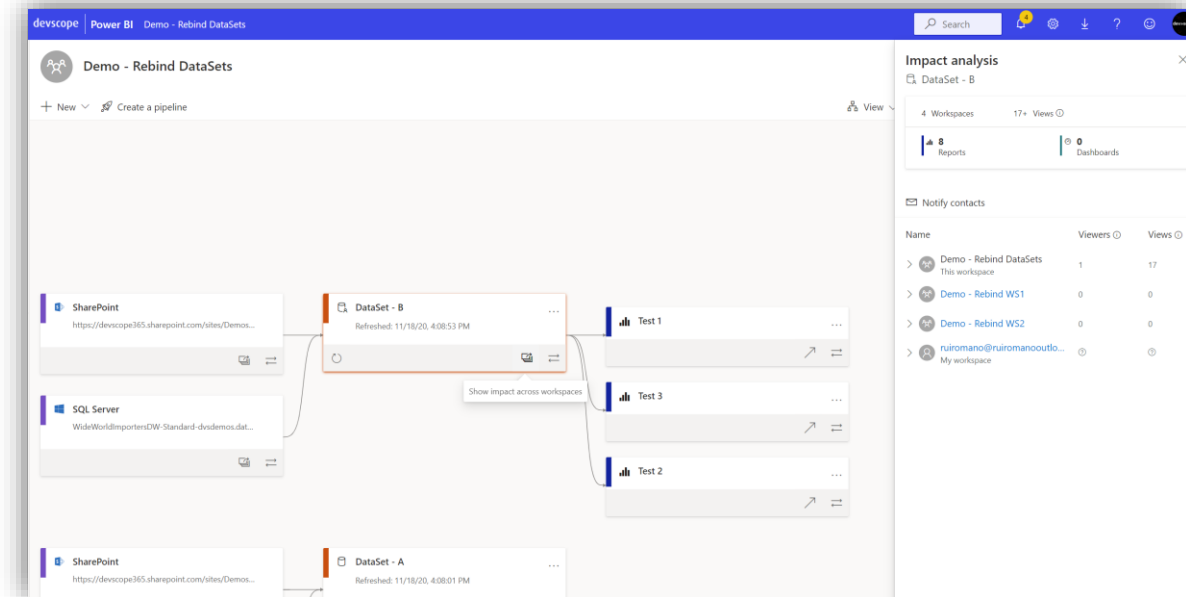

Approaches:

- Manual
 - By specifying the reports & datasets to rebind
- Automatic
 - by getting all reports connected to “old” dataset

APIs:

- [Rebind API](#)

Download: [here](#)

Workspace Premium Capacity Switch

Why?

Need to reassign all workspaces to another capacity:

- Gen 1 to Gen 2 migration
- P Sku <-> A Sku <-> PPU

Please don't do it manually 😊

API's:

- [AssignWorkspacesToCapacity](#)

```
ice-Premium Capacity Switch.ps1 | Report-Rebind-Manual.ps1

#Requires -Modules @{ ModuleName="MicrosoftPowerBIMgmt"; ModuleVersion="1.2.1026" }

cls

dev>scope

Realtime w/ REST API's

Push Dataset vs Streaming Dataset

Push Dataset

- Create a complex dataset: multiple tables, measures & relationships
- Automatically retains history
- Build Power BI Reports directly
- ~2-5s realtime
- Limitations: [link](#)

Streaming Dataset

- Limited to 1 table
- Cannot create measures
- No History, only if "Historic Analysis" is enabled
- <1s realtime

Capability	Push	Streaming	PubNub
Dashboard tiles update in real-time as data is pushed in	Yes. For visuals built via reports and then pinned to dashboard.	Yes. For custom streaming tiles added directly to the dashboard.	Yes. For custom streaming tiles added directly to the dashboard.
Dashboard tiles update with smooth animations	No.	Yes.	Yes.
Data stored permanently in Power BI for historic analysis	Yes.	No. Data is temporarily stored for one hour to render visuals.	No.
Build Power BI Reports atop the data	Yes.	No.	No.
Max rate of data ingestion.	1 request/s 16 MB/request	5 request/s 15 KB/request	N/A Data is not being pushed into Power BI
Limits on data throughput	1M rows/hour	None.	N/A Data is not being pushed into Power BI
